

Pro8mm Introduces the Complete Line of Fuji Film To Super8 & Max8 Filmmakers

January 18, 2006 for Immediate Release Media Contact: Rhonda@pro8mm.com

Pro8mm, known worldwide as an innovative leader in specialty small gauge film stocks, adds the complete line of **Fuji Motion Picture Film** to its Pro8mm film line.

Because super 8 is often used as an experimental, student, or test medium we thought it would be appropriate to make available to filmmakers a way of judging for themselves the merits of the new film stock technologies offered by both major film manufacturers. When Super 8 film is transferred to digital it is amplified so much that it is like taking out a microscope and seeing what the true nature of a stock can be. Small Format makes for the perfect platform to see these differences, make comparisons and try different techniques. The major film stock manufacturers are introducing so many improvements to film technology that you need a way to compare and sample them on a platform you can afford.

Pro8mm now offers 27 different stocks in Super 8, so filmmakers can test the differences in a film's capacity to capture an image. With the **new Pro8mm Fuji line** certain stocks will be available in our standard inventory, such as Pro8/73 made from the amazing new 500T **Eterna** technology, Pro/92, 500D, made from the **Realia** line and the two brand new **Eterna** stocks, Pro8/63, 250D and Pro8/ 53, 250T . These are all available at our standard price of \$35.00 for film & processing. Other stocks such as Pro8/40 made from **Fuji's Velvia** and Pro8/22, Pro8/62 & Pro8/72 made from the **Super F Series** are available on a custom order and pricing basis.

These new stocks are also available as part of our Pro8mm **all inclusive Easy 8 packages**. Our sampler 4 package includes the super 8 film stock, award winning processing, prep and clean, and full scene to scene color corrected Rank Transfer to mini dv for \$298.00. All you need to add is a Super8 camera and a creative idea. Film stocks can be mixed and matched with different stocks so that you can make comparisons. In addition special processing techniques are available including cross processing for **Velvia**, skip bleach for negative, push/ pull, and digital transfers to different formats, including DVD, DVCAM, and DIGIBETA for an additional charge.

For more information on ALL our products and services, including the new Max-8 film format, visit our web site at www.pro8mm.com , or send for our sample DVD which contains some test materials on the Pro8/73 Eterna stock.
